

Petition to remove Electrical Requirements from the Part 5 Michigan Residential Code (MRC) and Incorporate by Reference the Part 8 Michigan Electrical Code.

- A single electrical code would reduce cost for the industry.
- A single electrical code will enhance uniform application of electrical safety requirements across the state for inspectors, electricians, and contractors.
- Aligns with apprenticeship training and other *Code* update courses, whose curriculum is based on the National Electrical Code (NEC).
- Majority of licensed electricians do not own the MRC and rely on the NEC as the benchmark for safe electrical installations.
- The MRC is limited in scope and does not cover requirements for all residential related electrical installations (Wind, Solar, Electric Vehicles, Energy Storage, Generators, etc.).
